How does Quad-Clean technology work?

1. The mesh screen at the air intake port provides first step of protection.
2. As air enters the air-cleaning chamber, it is circulated in a rapid, cyclonic motion that forces the large contaminants out of the engine.
3. The reusable, environmentally friendly foam precleaner traps midsize contaminants.
4. Dual-metal mesh enforced, the pleated air filter traps the finest contaminants ensuring that only clean air enters the engine for maximum power and life of the engine.
