CHAIN HARROW SERIES 09 - A MULTI-PURPOSE SOLUTION

The Series 09 Chain Harrow is a multipurpose tool and an important element in Pasture maintenance. Versatile in its own right as a means of spreading organic matter and levelling seedbeds, Murray Chain Harrows are beneficial in strip grazed pasture situations and a useful adjunct to efficient harvesting of clover seed by vacuum harvesters. Ideal in direct drilling operations, Murray Chain Harrows are effective in spreading and gently levelling the soil after the important final operation of seeding.

Three depths of chain sections are available – 0.76m (2'6"), 1.5m (5') and 2.28m (7'6"), with each providing a different level of aggression and pulverisation to suit individual requirements. Chain sections are available in 6 convenient widths between 1.52m (5') and 6.09m (20').

SPECIFICATIONS

- Available in 3 depths 0.76m (2'6"), 1.5m (5') and 2.28m (7'6")
- High Carbon 10mm Square Steel
- Centre to Centre of Front Hooks 190mm (7 1/2")

LEVELLING AND PASTURE

COVERAGE: DEEP MESH CHAIN - 0.76M (2'6")
